Grading TurnItIn Assignment in Moodle

In AUA TurnItIn Assignments should be graded in Moodle and not in the TurnItIn. TurnItIn has a different way of grading and comments than Moodle does. In order to grade the assignment in the Moodle, you should go to **Submission Inbox**.

In the Submission Inbox you will see all submitted papers ready for grading. TurnItIn will automatically synchronize papers and will retrieve the similarity percentage.

- You can grade and leave comments in this window. The **pencil icon** will allow you to enter a grade. To submit the grade, you must click on the check mark next to the grade total.
- Comments can be added by clicking on the number in the parentheses next to the grade.
- You can also see under the **Similarity** column the percentage of the paper that has different sources, other than student’s own words. Clicking on one of the similarity numbers will open the report in the TurnItIn.
• If you want to leave comments in TurnItIn, then you need to open the paper in the TurnItIn, select the word that you want to comment on, and then select one of the comment types from the box on the right of the screen. You can also add a general comment using the **Comment** button, or use one of the commonly used feedback phrases.

![Commonly Used Comment Types](image)

• You can change the highlight color of the text, and type any feedback text in the box that appears. Click **Save** when done.

![Highlight Color Change](image)

• Students will see a blue comment icon in their paper. They can click on it to view your comment.

• If you want to view the sources used in the paper, then you need to click on the % box. A new window will open within the **TurnItIn Originality Report**. The content
that was used by the student and that will have matches with sources used will be colour-coded, and numbered within the work and on the right column.

• If you want to find out more about the source then you need to click on the matching percentage from the right column.
• You can always exclude or include back the sources used by selecting the Exclude Sources at the bottom of the page. Select the source you want to exclude and choose Exclude Sources. You can re-include sources by clicking the circle and line icon at the bottom of the Matches column.
